

AMIE™ Essentials for Wi-Fi

Device Provisioning and Spectralink Application Management

ADVANCED MOBILE
INTELLIGENCE
FOR ENTERPRISES

A web-based device management dashboard designed especially for IT and Telecommunications Administrators to oversee Spectralink Wi-Fi devices with fast deployment, centralized device administration, and Spectralink Application Management.

Deploying a new fleet of Wi-Fi devices can take weeks of valuable time. Configuring device settings, application settings, and assigning extensions individually is a tedious and repetitive task. What if you could manage deployments and more from one centralized tool? AMIE™ (Advanced Mobile Intelligence for Enterprises) Essentials from Spectralink optimizes device management for the entire Spectralink device lifecycle, filling in the gaps of Enterprise Mobile Management (EMM) systems by enabling detailed control of device deployment through batch configuration, streamlined extension sync, and copy configuration. The user-friendly and intuitively designed dashboard gives IT and Telecommunications Administrators the control to configure Spectralink applications on a device, group, or enterprise level. For day-to-day management, the main dashboard provides an operational view of the entire fleet, and battery management provides visibility into the battery health of devices across the enterprise from one screen.

Benefits

- Manage thousands of devices and batteries across an enterprise from one screen
- Optimize device provisioning
- Set up new replacement devices quickly by copying the configuration from the old device to the new one with just a click
- Configure Spectralink apps like Push-To-Talk, Buttons, SAFE, and BizPhone

AMIE Essentials Solves IT Administrators' Biggest Concerns

1. Monitor battery health and avoid disruption from depleted batteries

Battery Management (Versity Smartphones & 84 Series Wi-Fi Feature Phones)

Battery analytics are crucial to the management of shared devices. The battery dashboard provides visibility of battery health for individual batteries and allows administrators to alert users when a battery has reached the end of its life, preventing it from being placed back into the charger and circulated among other mobile workers. This ensures workers are equipped with operational batteries that will last an entire shift, so they can focus on their job and not worry about stopping to charge a device or battery.

2. Reduce the complexity of device deployment

Spectralink Application Management (SAM) (Versity Smartphones)

Spectralink Application Management simplifies deployment so devices can be set up and in the hands of workers within minutes. Easily configure Spectralink applications, like Push-To-Talk, BizPhone, SAFE, Barcode, Buttons, and more, at an enterprise, group, or device level through the intuitive and easy-to-navigate platform. Spectralink utility apps (Device Settings, Logging, SysUpdater, VQO, Web API) previously included in the AMIE Essentials bundle are now pre-loaded onto Versity smartphones for all customers.

- **Batch Configuration**

Batch configuration allows administrators to configure Versity smartphone call server registration, including call server IP address, extension, and username and password. EMMs require settings to be entered individually for each device, but batch configuration increases efficiency and allows settings to be configured in batches at the enterprise, group, or user level from one screen.

- **Streamlined Extension Sync**

Entering SIP client extensions individually into an EMM can take days of work, but with the Spectralink Application Management tool and the BizPhone SIP client, individual extensions for thousands of devices can be batch uploaded in seconds.

- **Copy Configuration**

Copy configuration enables administrators to quickly set up replacement devices. With a few clicks, the configuration from the returned phone will copy onto the new replacement device. The new device can be put into circulation in minutes, reducing the downtime an out-of-service device can cause.

3. Simplify software updates and device troubleshooting

Software Updates and Device logging (Versity Smartphones) SysUpdater is an easy-to-use web browser that hosts Versity smartphone software updates so administrators can easily manage them across large fleets of devices. Logging service centrally stores device log files for quick access when troubleshooting and debugging.

AMIE Essentials Includes:	Versity Series	84 Series
AMIE Main Dashboard	✓	✓
Battery Management	✓	✓
Spectralink Application Management <ul style="list-style-type: none"> • Batch configuration • Streamlined Extension set-up • Copy Configuration 	✓	
Web-based user interface for software updates (Beta)	✓	
Web-based user interface for device logging (Beta)	✓	

* Spectralink's Configuration Management Server (CMS) used to configure 84 Series devices is sold separately and is not required for use of AMIE.

AMIE Essentials is available through an annual subscription per device.

For a Demo of AMIE Essentials, contact your local sales representative or Spectralink Partner.

Need more visibility into device and network performance? Upgrade to the AMIE Advanced license for premium features like call performance analytics, proactive alerts, and device tracking.

About Spectralink

As an award winner in mobile technology, Spectralink has been transforming the way our customers work and communicate for 30+ years. Through our determination to do extraordinary things, we enable mobile workforces and empower our customers and partners to explore what's next, what's possible. With our enterprise grade, best-in-class mobile solutions, we are with our customers wherever they work, however they need us. Our people, commitment to innovation and our passion are our foundation for success.
