

Versity 95/96 Series for Healthcare

Modern Healthcare in Motion

Versity 95/96 Series is a clinical mobile device that enables patient-centered collaboration across the continuum of care.

Busy clinicians on the job need a device that gets the job done. They don't have time to deal with a fragile device that could break from a drop on the floor, whose battery could run out in a critical moment mid-shift, or one that will stop working if it accidentally gets dropped in water in the bathroom. If they accidentally leave their device in a supply closet, or kick it under a bed while aiding a distressed patient, they need a device that remains secure and is easy to locate. A phone with crystal clear voice quality - to hear orders, to request assistance, and to communicate back to patients and colleagues - is critical, and they need that voice to work as they move about a campus - in rooms, in stairways, and in elevators. The ability to scan medicine, patient bracelets, and barcodes on records is also a necessity. And they need this all in a lightweight device that they can use in one hand and that won't weigh down a scrubs pocket. Spectralink Versity 95/96 enterprise smartphone is the answer; **it just works.**

Our Versity 95/96 enterprise grade smartphone streamlines a clinician's many tools into a single multi-purpose device, expertly integrating with a hospital or care facility's communication system for one unified solution. Now, clinicians can reach who they need when they need them—with immediate, reliable, and secure voice, text, and critical alarms and alerts.

Versity 95/96 Series smartphone is the rugged phone with the big screen that can withstand cleanings with hospital-grade disinfectants. It's the premium solution that puts information, notification, documentation, and communication right at clinicians' fingertips.

With Spectralink you get:

- Our proprietary Voice Quality Optimization™ (VQO) technology delivers crystal clear voice quality you can count on, plus noise suppression and echo cancellation capabilities
- Access to our world-class ecosystem of application partners to ensure your workers have the tools they need to get the job done
- The best call control UC interoperability in the industry – we integrate with all leading UC platforms
- Supported by AMIE, our mobile analytics platform, for easy deployment, call quality monitoring, and battery health to ensure you get the most out of your mobility investment.

Improves patient care

- Coordinate patient care across all care team members
- Gain real-time access to patient information such as vital signs, dietary needs, medication information, and patient pain assessment scores
- Enable HIPAA-compliant secure text messages

Increases patient satisfaction

- Update patient information at the point of care
- Respond faster and more efficiently to critical alarms and alerts
- Access lab results for faster diagnostics and care

Optimizes workflows

- Get the right information instantly with access to clinical applications and systems
- Improve staff visibility and connectivity
- Centralize alerts and notifications

Mission-critical availability

- Versity 95/96 Series offers a truly hot-swappable battery. Users can swap out the battery while using an app or on a call without the phone shutting down.
- Versity 95/96 Series' superior engineering provides optimized "anywhere communication" with in-building Wi-Fi, Bluetooth, GPS, LTE*, and NFC. No need to stay tied to a landline or find a phone to answer an overhead page. And, no need to worry about losing a call or information access while on the move.
- Versity 95/96 Series SAFE or 'man down' and panic button features provide workers with the reassurance of safety anywhere on the job.

*LTE only available in EMEA/APAC

Seamless integration

Versity 95/96 Series integrates seamlessly and securely with leading healthcare applications and innovation partners, including paging, messaging, voice recognition, EHRs, nurse call, alarms, secure texting, single sign-on, and location services for uninterrupted communication on the move— helping to improve patient outcomes and experiences, optimize workflow efficiencies and put caregivers back at the patient bedside – where they matter most.

Make the conversation clear

Clinicians need to be heard wherever they are on the job. Lives depend on it. Yet the constraints of the hospital, the overhead alarms, the thick walls, even the elevators—can all get in the way of making a clear call.

Our Voice Quality Optimization™ (VQO) delivers superior voice quality through cutting edge technology designed with years of expertise in the field. Our Versity 95/96 device also features a dedicated Wi-Fi antenna for call coverage and multiple optimally placed microphones that cancel out the background noise and won't get clogged with sweat or makeup by busy clinicians constantly on the move.

With the Versity 95/96 smartphone, mobile users can stay in touch with peers, doctors, lab personnel, and anyone else they need to reach for optimal patient care. Quickly. Reliably. Consistently. No matter what environment they are in. Versity 95/96 makes healthcare mobility work.

Enable patient care collaboration

Through our application partners, Versity 95/96 lets nurses, doctors, and other care team members collaborate faster and more effectively. Having patient records and current information as well as a high-quality barcode scanner at their fingertips improves care coordination, reduces the potential for errors, streamlines workflows and enables clinicians to spend more time focusing on their patients.

Facilitate clinical safety

Versity 95/96 enables caregivers to request resources and assistance quickly in an emergency. Automated alerting, including details of the patient situation, facilitates timely, informed responses and effective triage.

Spectralink SAFE also protects clinicians with access to security at the touch of a red button at the top of the device.

Alarm button (red)

Monitor Patients

With Versity 95/96 devices, the clinician's connection to their patients remains intact, even when they are away from their rooms. Versity 95/96 provides a large color display that is readable in various lighting conditions to access loads of information without needing to find a computer station. **And, patient vital signs and waveforms are easily accessed and readable – even on the go.**

Through our leading clinical application integration, alarms and alerts are sent directly from the patient's bed and monitoring systems right to the Versity 95/96 device, allowing for the constant ability to respond to a patient's needs and triage appropriately, no matter where the caregiver may be, thereby preventing further harm to the patient.

Rugged durability

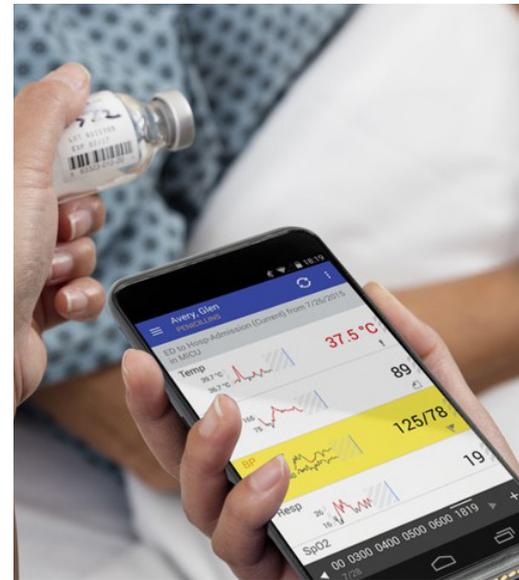

From scratch and shatter-proof Gorilla™ glass to medical-grade resin, Versity 95/96 is tough right out of the box without the need for protective cases that would add to the overall solution cost and make the device more clunky. Versity 95/96 can withstand more than 78 drop cycles from 6 feet high onto a steel plate, or, in clinician's terms, being accidentally kicked against a wall, dropped out of a scrubs pocket, tumbled down the stairs or any other accident likely to happen.

Versity 95/96 is dustproof and waterproof, and even flush proof – it will still work if it lands in water. From a cleaning perspective, it can withstand UV sanitization and can also be cleaned with hospital-grade cleaners that would degrade competitive or consumer devices.

Secure data exchange

Versity 95/96 lets clinicians safely exchange critical information via real-time secure text messaging from partners like Cerner, Spok, TigerConnect, Connexall, Philips Healthcare, Imatis, and Best. Through these applications, caregivers can share the latest updates on their patients, knowing this information will always be safe, secure, and HIPAA compliant.

Clinicians on the go can access the information they need right at their fingertips—whether they're connecting with patients and colleagues or collecting data with built-in scanners. The possibilities with Versity 95/96 are endless, helping improve patient outcomes and experiences and enhancing the lives of its users with one single world-class, enterprise-grade device.

Device Management and Insights

Healthcare more than any other industry needs to provide a continuum of care: devices need to always be up and working properly for staff to take care of patients. A battery that dies mid-shift could cost valuable time to charge or replaced, and more importantly, a dropped call or bad voice quality because of a network or AP issue could cost a life. AMIE™, our cloud-based mobile analytics dashboard for IT and Telecommunications Administrators, provides valuable insight into device and network health, supporting mission-critical mobility so that your clinicians have the peace of mind to know that their Versity 95/96 device is going to work and do what it is supposed to do: enable information and communication at their fingertips anywhere on the job for optimal patient care.

About Spectralink

As an award winner in mobile technology, Spectralink has been transforming the way our customers work and communicate for 30+ years. Through our determination to do extraordinary things, we enable mobile workforces and empower our customers and partners to explore what's next, what's possible. With our enterprise grade, best-in-class mobile solutions, we are with our customers wherever they work, however they need us. Our people, commitment to innovation and our passion are our foundation for success.
